

Construire dans chaque cas la droite représentant la fonction affine  $f$  dont on connaît un point et le taux d'accroissement  $a$ .

1.

$$\begin{aligned} f(2) &= 1 \\ a &= 2 \end{aligned}$$

2.

$$\begin{aligned} f(-3) &= 2 \\ a &= -1 \end{aligned}$$

3.

$$\begin{aligned} f(-4) &= 1 \\ a &= 2 \end{aligned}$$

4.

$$\begin{aligned} f(2) &= 3 \\ a &= 1 \end{aligned}$$

5.

$$\begin{aligned} f(-1) &= 4 \\ a &= -3 \end{aligned}$$

6.

$$\begin{aligned} f(4) &= 4 \\ a &= 2 \end{aligned}$$

7.

$$\begin{aligned} f(3) &= 4 \\ a &= 4 \end{aligned}$$

8.

$$\begin{aligned} f(0) &= -3 \\ a &= 5 \end{aligned}$$

9.

$$\begin{aligned} f(2) &= 1 \\ a &= \frac{1}{2} \end{aligned}$$

10.

$$\begin{aligned} f(2) &= -4 \\ a &= \frac{3}{2} \end{aligned}$$

11.

$$\begin{aligned} f(-4) &= 0 \\ a &= \frac{3}{4} \end{aligned}$$

12.

$$\begin{aligned} f(1) &= 4 \\ a &= \frac{-1}{3} \end{aligned}$$

13.

$$\begin{aligned} f(1) &= 3 \\ a &= -0,5 \end{aligned}$$

14.

$$\begin{aligned} f(4) &= 0 \\ a &= \frac{4}{5} \end{aligned}$$

15.

$$\begin{aligned} f(-3) &= 2,5 \\ a &= -2,5 \end{aligned}$$

16.

$$\begin{aligned} f(-4) &= -4 \\ a &= \frac{7}{8} \end{aligned}$$
