

How to write a good subject ?

1. Think It Through

You don't have to be an expert to write intelligently on any subject, but you do need enough knowledge to convince your reader that you know what you're talking about. Spend some time thinking and researching before you sit down to write. What's interesting, unique, important, or exciting about the subject? Why would someone want to read about it? Shift your imagination into high gear.

2. Write It Down

When you have some ideas to work with, start writing. Let your imagination run wild. Don't worry about proper sentence structure at this point -- just get your thoughts out in front of you and go with the flow. Ideas are like potato chips... if you have one, you'll probably have lots more.

3. Fill It In

Go back through what you've written and add more detail. Fill in the blanks. Connect the ideas. Build the structure. This is where you establish your style and tone. Think about who's going to read your work and choose words that make sense to the people you're writing for. Junior high students don't use the same vocabulary as research scientists.

4. Let It Rest

If the words aren't fitting together quite right, take a break. Clear your mind and let go of any angst you're feeling about your writing. When you start again, it will be easier to see what's working and what needs more work.

5. Check It Out

When you've completed a rough draft, read it through from beginning to end. Do you have a catchy title and an engaging lead? Does the body hold the reader's interest? Does it make sense? Don't rely on a spell-check program to catch your errors. Print out a copy and read it out loud. Your ears can catch the mistakes your eyes missed.

6. Clean It Up

Go back and fix any spelling, punctuation or grammar errors you found. Use a dictionary, thesaurus, and a style book to smooth the rough spots and polish your words until they shine. Edit, read, and repeat as needed.

7. Pass It Around

Ask someone else to read what you've written. You know your mother and your best friend will think it's great, so try to get feedback from somebody who doesn't already think you're perfect. Be open to suggestions and willing to make changes, but ultimately you must be certain they are your words and that they speak well for you.

Pollution

Many cities around the world today are heavily polluted. Careless manufacturing methods employed by some industries and absence of consumer demand for environmentally safe products have been behind the pollution problem. One result is that millions of tons of glass, paper, plastic and metal containers are produced, and these are difficult to dispose of.

However, today more and more consumers are choosing 'green' and demanding that the products they buy are safe for the environment. Before they buy a product, they ask questions like these, Will this product damage the ozone layer?, Is this package of any danger to the environment? Or Can this metal container be used once?

A recent study showed that two out of five adults now consider the Environmental safety of a product before they buy it. This means that companies must now change the way they make and sell their products to make sure that they are 'green', that is, friendly to the environment.

Only a few years ago, it was impossible to find green products in supermarkets, but now there are hundreds. Some supermarket products have tickets on them to show that the product is green. Some companies have made the manufacturing of clean and safe products their main selling point and insist on it in their advertising. The concern of a safer and cleaner environment is making companies rethink how they do business. The public will no longer accept the old attitude of Buy it, Use it and then Throw it away.

Air pollution

air pollution can effect our health in many ways with a both short-term effects different groups of individuals are effected by air pollution in different ways .some individuals are much more sensitive to pollutants than are others. young children and elderly people after suffer môtre from effects of air pollution.poeple with health problems such asthma .heart and lung disease may also suffer more when the air is poolluted the extent to wich in individual is harmed by air pollution usualy depends on the total to the damaging chemicals i.e the duration

of exposure and the concentration of the chemicals must be taken into account..this s the end of pragraph i wish to benefit it ok

Racism

Racism or racialism is a form of race, especially the belief that one race is superior to another. Racism may be expressed individually and consciously, through explicit thoughts, feelings, or acts, or socially and unconsciously, through institutions that promote inequality between races.

In the 19th century many legitimized racist beliefs and practices through scientific theories about biological differences among races. Today, most scientists have rejected the biological basis of race or the validity of "race" as a scientific concept. Racism, then, becomes discrimination based on alleged race. Racists themselves usually do believe that humans are divided into different races.

There are two main definitions of racism today. One of them states that racism is discrimination based on alleged race, the other - newer - one states that racism has started to include also discrimination based on religion or culture

Racism

Turkish children playing in a muddy courtyard; faces of Vietnamese girls pressed against the windows of dirty barracks; security guards with their guns standing near the fences. This is an area in Cottbus, an industrial town in Germany that the police are trying to protect. It looks more like a prison than a refuge for immigrants who are more and more exposed to the violence of racist groups, like the skinheads.

Earlier this month, gangs of lawless German youths began attacking Vietnamese, Turkish and African labourers, so the authorities have rushed the victims to such places like Cottbus. Indeed, a wave of anti-immigrant violence is sweeping Germany. Every day brings some new spectacle of terror. Luckily the violence is limited to small uncontrolled groups. Most Germans are outraged at those racist gangs and refer to them as criminals and delinquents looking for fun. Thousands of Germans have marched in Berlin and other cities to protest against racism. However, foreign workers in Germany still fear for their lives and their families and do not feel totally secure. Some are thinking of going back to their native countries.

Are tourists good for a country

This question can be looked from several points of view. Firstly, tourism should be considered in relation to a country's economy. Secondly it can be seen in terms of its effects on the countryside and environment. Thirdly, the influence of the tourist industry on culture must be taken into account. The economy of a country often benefits as a result of tourism; foreign visitors come and spend their money, and this creates jobs for those who run hotels and restaurants. However, there are also certain drawbacks. Whereas the people directly involved in the industry may benefit, other may find that they are worse off. This is because the cost of living goes up and goods become more expensive since tourists are prepared to pay more for them. As far as the effect on the environment is concerned, tourism is often a bad thing. While it is true to say that development results in better roads being built and improvements for poorer areas, it is sometimes very harmful. In some countries, huge hotels and skyscrapers have ruined areas of unspoilt beauty. The cultural influence of tourism is difficult to measure. In some countries foreign influence can destroy the local way of life. On the other hand,

countries which do not encourage tourism may miss the benefits that foreign technology and investment can bring. In conclusion, it can be seen that tourism has both advantages and disadvantages; if it is controlled properly, it can be good for a country, but there will always be a danger that it may do a great deal of harm.

Humain rights

The concept of human rights has existed under several names in European thought for many centuries, at least since the time of King John of England. After the king violated a number of ancient laws and customs by which England had been governed, his subjects forced him to sign the Magna Carta, or Great Charter, which enumerates a number of what later came to be thought of as human rights. Among them were the right of the church to be free from governmental interference, the rights of all free citizens to own and inherit property and be free from excessive taxes. It established the right of widows who owned property to choose not to remarry, and established principles of due process and equality before the law. It also contained provisions forbidding bribery and official misconduct.

The political and religious traditions in other parts of the world also proclaimed what have come to be called human rights, calling on rulers to rule justly and compassionately, and delineating limits on their power over the lives, property, and activities of their citizens.

In the eighteenth and nineteenth centuries in Europe several philosophers proposed the concept of "natural rights," rights belonging to a person by nature and because he was a human being, not by virtue of his citizenship in a particular country or membership in a particular religious or ethnic group. This concept was vigorously debated and rejected by some philosophers as baseless. Others saw it as a formulation of the underlying principle on which all ideas of citizens' rights and political and religious liberty were based.

In the late 1700s two revolutions occurred which drew heavily on this concept. In 1776 most of the British colonies in North America proclaimed their independence from the British Empire in a document which still stirs feelings, and debate, the U.S. Declaration of Independence

The Human Development

The Human Development Index (HDI) is a comparative measure of life expectancy, literacy, education, and standard of living for countries worldwide. It is a standard means of measuring well-being, especially child welfare. It is used to determine and indicate whether a country is a developed, developing, or underdeveloped country and also to measure the impact of economic policies on quality of life.[1] The index was developed in 1990 by Indian Nobel prize winner Amartya Sen, Pakistani economist Mahbub ul Haq, with help from Gustav Ranis of Yale University and Lord Meghnad Desai of the London School of Economics and has been used since then by the United Nations Development Programme in its annual Human Development Report. Described by Amartya Sen as a "vulgar measure", because of its limitations, it nonetheless focuses attention on aspects of development more sensible and useful than the per capita income measure it supplanted, and is a pathway for serious researchers into the wide variety of more detailed measures contained in the Human Development Reports. The HDI measures the average achievements in a country in three basic dimensions of human development:

A long and healthy life, as measured by life expectancy at birth. Knowledge, as measured by the adult literacy rate (with two-thirds weight) and the combined primary, secondary, and tertiary gross enrollment ratio (with one-third weight). A decent standard of living, as measured by the log of gross domestic product (GDP) per capita at purchasing power parity

(PPP) in USD. Each year, UN member states are listed and ranked according to these measures. Those high on the list often advertise it (e.g., Jean Chrétien, Former Prime Minister of Canada [1]), as a means of attracting talented immigrants (economically, individual capital).

Immigration

Morocco recently saw a migration of the population of cities and villages especially in the last 50 years that happened since Morocco for independence. What are the reasons that drive housing villages to migrate to cities? And what are the causes of migrations out of the negative impact?

-There is a range of reasons why the villagers to the cities. Among them lack even the most basic means necessary: hospitals and transportation means. Finding work. Mestekarealthossein circumstances of living ect . The result eased the congestion entire towns and neighborhoods. Baladi shanties and Tahera begging and the use of young children. Resulting from the whole circumcised eased some tragic scenes.

-Finally, I wish to state that changed everything in their power to stop the advance of the pious and out of control the situation.

Immigration to the USA

Twenty seven million white immigrants entered the United States between 1880 and 1924. Two thirds of these so-called new immigrants came from different parts of Europe that were economically underdeveloped. In the first decade of the 20th century, about six million immigrants arrived from Russia, Austria, Hungary and Italy. They were drawn by the flourishing manufacturing sector of the economy. They not only brought their labour force but also their skills that were vital to industries such as construction and textile. Nevertheless, their customs and culture struck native-born, Americans who considered them as impossible to assimilate.

That phenomenon did not last forever. With the end of the colonial empires in the fifties and sixties and emergence of independent Asian and African countries, a new law was voted: The 1964 Hart-Cellar Act. This law gave equal access to Asians, Africans, Latin-Americans and Europeans. Since then, over eight million legal immigrants have entered the United States, about half of them from the Third World.

The new immigrants are likely to change the composition of the American population. Some demographers predict that by 2030, American and European roots will not be a majority. Even the dominance of the English language is seen as uncertain. The problem is whether the diversity of origins will continue to maintain American Society as united as it has been so far.

Americans

Among the reasons why immigrants have traditionally come to the USA is to have a better life – that is to raise their standard of living. It was properly the most important reason for leaving their homeland. Because of its abundant natural resources, the United States appeared to be a “land of plenty” where millions could come to seek their fortunes. Of course, most immigrants “didn’t get overnight” and many of them suffered terribly, but the majority of them were eventually able to improve their former standard of living.

Americans pay a price, however, for their material wealth: hard work. Hard work has been both necessary and rewarding for most Americans throughout their history. Because of this,

they have come to see material possessions as the natural reward for their hard work. In some ways, material possessions are seen not only as a clear evidence of people's work, but also of their abilities. Most Americans believe that if people work hard, they are likely to have a good standard of living.

Since people's status in society is frequently measured by how much they own, Americans often feel pressured to buy more than they need. They want to appear as prosperous as everyone else around them, and this means making a continuing effort to buy newer and better material.

In reality, some people have a better chance for success than others. Those who are born into rich families have more opportunities than those who are born in poorer families. Inheriting money gives a person a real advantage. In spite of laws designed to promote equality of opportunity for all races, many black Americans have fewer opportunities than the average white Americans.

Globalization

Globalization refers to increasing global connectivity, integration and interdependence in the economic, social, technological, cultural, political, and ecological spheres. Globalization is an umbrella term and is perhaps best understood as a unitary process inclusive of many sub-processes (such as enhanced economic interdependence, increased cultural influence, rapid advances of information technology, and novel governance and geopolitical challenges) that are increasingly binding people and the biosphere more tightly into one global system. There are several definitions and all usually mention the increasing connectivity of economies and ways of life across the world. The Encyclopedia Britannica says that globalization is the "process by which the experience of everyday life ... is becoming standardized around the world." While some scholars and observers of globalization stress convergence of patterns of production and consumption and a resulting homogenization of culture, others stress that globalization has the potential to take many diverse forms.

War

WAR is one of the worst crime that people have ever made to the humanity. that's why we should know why some idiot people can't stand leaving in peace because the best thing that can draw the smile on every one's face is the peace. but in reality we have a deferent image to the world, we see that no one want to respect the right of other or want's to enslave people or take there weals, and they make some silly reasons to get what they want exactly like what happend to

our brothers in iraq.

war also creat a very bad destarction and ruin in everywhere.

and from the main point we can say that poepl in stean of burning world they have to to learn how to leave in peace and creat the happiness instead of hate and killing.

Business

In economics, business is the social science of managing people to organize and maintain collective productivity toward accomplishing particular creative and productive goals, usually to generate profit.

The etymology of "business" refers to the state of being busy, in the context of the individual

as well as the community or society. In other words, to be busy is to be doing commercially viable and profitable work.

The term "business" has at least three usages, depending on the scope — the general usage (above), the singular usage to refer to a particular company or corporation, and the generalized usage to refer to a particular market sector, such as "the record business," "the computer business," or "the business community" -- the community of suppliers of goods and services.

The singular "business" can be a legally-recognized entity within an economically free society, wherein individuals organize based on expertise and skills to bring about social and technological advancement.

In predominantly capitalist economies, businesses are typically formed to earn profit and grow the personal wealth of their owners.

The owners and operators of a business have as one of their main objectives the receipt or generation of a financial return in exchange for their work — that is, the expense of time and energy — and for their acceptance of risk — investing work and money without certainty of success.

Notable exceptions to this rule include some businesses which are cooperatives, or government institutions.

However, the exact definition of business is disputable as is business philosophy; for example, some Marxists use "means of production" as a rough synonym for "business"; however a more accurate definition of "means of production" would be the resources and apparatus by which products and services are created.

Control of these resources and apparatus results in control of business activity, and so, while they are very closely related, they are not the same thing.

Socialists advocate either government, public, or worker ownership of most sizable businesses. Some advocate a mixed economy of private and state-owned enterprises. Others advocate a capitalist economy where all, or nearly all, enterprises are privately owned.

Business Studies is taught as a subject in many schools

Natural disaster

A is the consequence of when a potential natural hazard becomes a physical event (e.g. volcanic eruption, earthquake, landslide) and this interacts with human activities. Human vulnerability, caused by the lack of planning, lack of appropriate emergency management or the event being unexpected, leads to financial, structural, and human losses. The resulting loss depends on the capacity of the population to support or resist the disaster, their resilience.[1] This understanding is concentrated in the formulation: "disasters occur when hazards meet vulnerability".[2] A natural hazard will hence never result in a natural disaster in areas without vulnerability, e.g. strong earthquakes in uninhabited areas. The term natural has consequently been disputed because the events simply are not hazards or disasters without human involvement

Advertinsing

One the hand advertising makes consumers aware, of the new products on the market and helps them spend their money wisely it also as creates many jobs .

On the other hand advertising makes people feel frustrated, if they can't afford the products .it also increases the prise of goods what's more it urges consumers to buy unnecessary commodities .

A drought

A drought is a prolonged, abnormally dry period when there is not enough water for users' normal needs. Drought is not simply low rainfall; if it was, much of inland Australia would be in almost perpetual drought. Because people use water in so many different ways, there is no universal definition of drought.

Meteorologists monitor the extent and severity of drought in terms of rainfall deficiencies. Agriculturalists rate the impact on primary industries, hydrologists compare ground water levels, and sociologists define it on social expectations and perceptions

Families

It's not necessarily a fact that small families are the best, but the fact that raising just one child is extremely expensive. There is the hospital bill, one must have good medical/dental (very expensive) for those toothaches, possible braces, fevers, scrapes, childhood diseases, not to mention the many shots children get during their younger years. There is clothing, food, a good home to live in, education and other hidden costs. Your child is better adjusted if they (a boy) are put into a sport at the age of 5 or 6, or if it's a girl, into dancing, etc., to keeping them off the streets and also give them insight as to what the future can hold for them. It costs many thousands of dollars to raise one child, and I use to know the stats on it, but it has since changed.

If a family can afford more than 2 children (good to have sibling) then they should go for it. I have known families during the 50s to 70s where there were 5 - 8 kids in a family and they were all well adjusted kids, not to mention the oldest child always ends up helping mom and pop out. Large families can be fun, but if you can't afford it this can cause a great deal of pressure on the parents and either shorten their life span or end in divorce. To have a large family you have to be well organized

Right of women

Nowadays we take it for granted that women have the same rights as men before the first world war few people believed this.

As far as work was concerned there were jobs wich were regarded as women`s jobs and other wiche were regarded as men`s jobs. Women`s jobs were generally lower paid as men`s. Men did almost all the heavy jobs in industry or in transport.

Women had jobs like dress-making, cleanning or worked as servants.

Women`s main role was as being to raise children and look for their home. Women were not expected to take position of leadership. Women were not even allowed to vote in elections. Before the war some women had been struggling to achieve greater equality with men. The most famous of these had been the suffragettes who staggged a violent campaign against the government from 1905 to 1914 trying to achieve the right to vote.however, at the outbreak of war, the were still no near to success. Many men argued that women were unsuited to such responsibility that women could not be trusted to vote sensibly that women should not concern themselves with such male activities and voting.

During the war many things changed

Women

Millions of women throughout the world live in conditions of abject deprivation of, and attacks against, their fundamental human rights for no other reason than that they are women. Combatants and their sympathizers in conflicts, such as those in Sierra Leone, Kosovo, the Democratic Republic of Congo, Afghanistan, and Rwanda, have raped women as a weapon of war with near complete impunity. Men in Pakistan, South Africa, Peru, Russia, and Uzbekistan beat women in the home at astounding rates, while these governments alternatively refuse to intervene to protect women and punish their batterers or do so haphazardly and in ways that make women feel culpable for the violence. As a direct result of inequalities found in their countries of origin, women from Ukraine, Moldova, Nigeria, the Dominican Republic, Burma, and Thailand are bought and sold, trafficked to work in forced prostitution, with insufficient government attention to protect their rights and punish the traffickers. In Guatemala, South Africa, and Mexico, women's ability to enter and remain in the work force is obstructed by private employers who use women's reproductive status to exclude them from work and by discriminatory employment laws or discriminatory enforcement of the law. In the U.S., students discriminate against and attack girls in school who are lesbian, bi-sexual, or transgendered, or do not conform to male standards of female behavior. Women in Morocco, Jordan, Kuwait, and Saudi Arabia face government-sponsored discrimination that renders them unequal before the law - including discriminatory family codes that take away women's legal authority and place it in the hands of male family members - and restricts women's participation in public life.

Women working

There have been a lot of changes in our social life in the last decades .many more women working ,of course ,has the lifestyle of many families
Many people are worried whether a career women can properly care for the children the advantage of women working
women and men are equal and should also have the right have a job
women should help in the development of their country
career mothers are usually educated and so can help their family
the disadvantage of career women : women find it difficult to take very good care of children while working outside they usually return home tired often a day 's work outside they also have to deal with the house work they are left with little time to care for their children .
this affects a lot the whole family ,and may cause problems for children at schoole bc.
.finally i say that at taking good care children of women /mothers alone
man/father should also share this responsibility with their wives
life is getting very expensive and women to help their family

Working children

Child labour is one of the problems that many countries face, there are various causes that drive children to work some of them drop out of school in order to help their poor or sick parents others have to work because they are orphans. In addition some parents are ignorant they think education is a waste of time.
Working children face a tough life; in factories and mines they work in bad conditions no fresh air, long hours they may be injured by machines they are also deprived of education and childhood

Old at twenty

The story of women in sports is like the story of women in many other activities. First they were ignored, and then gradually became accepted. Now they are just taken for granted as part

of any sporting events.

Take gymnastics, for instance. When women first took part in the Olympic Games in 1928, they were not allowed to do gymnastics. Women's gymnastics was then thought 'indecent'. The first woman to attract attention to this sport was a Russian girl called Olga Korbut. In the 1972 Olympic Games in Munich she amazed everybody and won a gold medal. The next girl who surprised the whole sporting world was the Romanian gymnast Nadia Comaneci. In the 1976 Olympic Games she won the overall title. She was then 14. Girls' popularity in this sport was here to stay.

However, if these girls get glory at such an early age, they pay for it. They work hard. What's more, they give their lives, quite often from the age of seven, to the sport. They are considered 'old' at the age of twenty.

Perhaps you are wondering what they do when they 'retire'. For some, fame continues. Olga Korbut, for instance, became a film star and married a Rock musician. Others fall back into obscurity and have to adapt to a new way of life.

When asked in an interview whether she regretted her career, Nelli Kim, an 'old' gymnast answered, "No. For the rest of your life you always remember the wonderful sensation of flying through the air, after a good routine on the bars. It really is a moment of perfection."

Smoking

When your parents were young, people could buy cigarettes and smoke pretty much anywhere - even in hospitals! Ads for cigarettes were all over the place. Today we're more aware about how bad smoking is for our health. Smoking is restricted or banned in almost all public places and cigarette companies are no longer allowed to advertise on buses or trains, billboards, TV, and in many magazines.

Almost everyone knows that smoking causes cancer, emphysema, and heart disease; that it can shorten your life by 14 years or more; and that the habit can cost a smoker thousands of dollars a year. So how come people are still lighting up!

Education

Education encompasses teaching and learning specific skills, and also something less tangible but more profound: the imparting of knowledge, good judgement and wisdom. Education has as one of its fundamental goals the imparting of culture from generation to generation (see socialization). Education means 'to draw out', facilitating realisation of self-potential and latent talents of an individual. It is an application of pedagogy, a body of theoretical and applied research relating to teaching and learning and draws on many disciplines such as psychology, philosophy, computer science, linguistics, neuroscience, sociology and anthropology.

The education of an individual human begins at birth and continues throughout life. (Some believe that education begins even before birth, as evidenced by some parents' playing music or reading to the baby in the womb in the hope it will influence the child's development.) For some, the struggles and triumphs of daily life provide far more instruction than does formal schooling (thus Albert Einstein's admonition to "never let school interfere with your education"). Family members may have a profound educational effect — often more profound than they realize — though family teaching may function very informally
, our food.

In conclusion, these problems are growing daily because people don't want to change their lifestyle. People need to be educated so they will stop damaging our planet.

Furthermore, governments should take actions to prevent individuals and companies from harming their environment

Languages

A language is a system used to facilitate communication among higher animals and/or computers. This article is about the fundamental features typically found in nearly all natural human languages. For information about artificial languages specifically for computers, please see instead machine code. Higher animals believed to employ audible language only, without symbols, include, but are not limited to, dolphins and whales. For information about this subject, please see "Animal communication" instead

English

World science is dominated today by a small number of languages, but English which is probably is the most popular global language of science and of modern technology that because many reason: first it is international language and the majority of country used it as their home language, In addition to that you can understand what happen in the world, in the other hand you can understand the new technology, moreover we see that the people that speak more than two language have a chance to get a better job than the other people who can speak just one. And also it is very important to student who want finish their Hight study in university.

Finally English will become more important in the future and more using in all things

Minorities

A minority or subordinate group is a sociological group that does not constitute a politically dominant plurality of the total population of a given society. A sociological minority is not necessarily a numerical minority — it may include any group that is disadvantaged with respect to a dominant group in terms of social status, education, employment, wealth and political power. To avoid confusion, some writers prefer the terms "subordinate group" and "dominant group" rather than "minority" and "majority".

In socioeconomics, the term "minority" typically refers to a socially subordinate ethnic group (understood in terms of language, nationality, religion and/or culture). Other minority groups include people with disabilities, "economic minorities" (working poor or unemployed), "age minorities" (who are younger or older than a typical working age) and sexual minorities (whose sexual orientation or gender identity differs from the sociological norm).

The term "minority group" often occurs alongside a discourse of civil rights and collective rights which gained prominence in the 20th century. Members of minority groups are subject to differential treatment in the society in which they live. This discrimination may be directly based on an individual's perceived membership of a minority group, without consideration of that individual's personal achievement. It may also occur indirectly, due to social structures that are not equally accessible to all. Activists campaigning on a range of issues may use the language of minority rights, including student rights, consumer rights and animal rights. In recent years, some members of social groups traditionally perceived as dominant have attempted to present themselves as an oppressed minority, such as white, middle-class heterosexual males.

Studies have consistently shown a correlation between negative attitudes or prejudice toward minorities and social conservatism (as well as the converse, positive attitudes and social

progressivism).[2] Minority groups in history, include Jews under Nazi Germany and African Americans in the Jim Crow period

Television

Nowdays ,TV viewers have a wide choice of channels .More and more people have got satellite TV not all of them are satisfied with it .
satellite TV has both advantages and drawbacks . whats is de advantages and drawbacks of TV,?

-satellite TV brings the whole world into your home there a variety of programmes to choose fromit helps people improve foreigs languages and there are lots of entertaining ...educating programmes. You may not feel bored.

-and the drawbacks of satellite TV :

People spend too mush time watching TV and they become passive and lazy there are too many channels and it is often dificult to choose the right programme and the people watch foreign TV channels and not their national TV .

Thy don't know what is happening in their country ,they might forget about their own culture and problem

Children don't do their homework ,don't read enough .

-satellite TV like any other technology is means to an end people should be selective and watch interesting programmes only.

Television

Television has became part of our every day life .what are its advantages and disadvantages On the one hand, TV has became the most influential means of the mass media because it has both sound and picture .it's also the most popular source of information education and international , in brief TV brings the whole word to us.

One the other hand TV develops passive and lazy viewers .it also prevents communication between the members of the family besides students don't their homework and may became aggressive when they watch films of violence.

Cinema

For the first twenty years of motion picture history most silent films were short--only a few minutes in length. At first a novelty, and then increasingly an art form and literary form, silent films reached greater complexity and length in the early 1910's. The films on the list above represent the greatest achievements of the silent era, which ended--after years of experimentation--in 1929 when a means of recording sound that would be synchronous with the recorded image was discovered. Few silent films were made in the 1930s, with the exception of Charlie Chaplin, whose character of the Tramp perfected expressive physical moves in many short films in the 1910's and 1920s. When the silent era ended, Chaplin refused to go along with sound; instead, he maintained the melodramatic Tramp as his mainstay in City Lights (1931) and Modern Times (1936). The trademarks of Chaplin's Tramp were his ill-fitting suit, floppy over-sized shoes and a bowler hat, and his ever-present cane. A memorable image is Chaplin's Tramp shuffling off, penguin-like, into the sunset and spinning his cane whimsically as he exits. He represented the "little guy," the underdog, someone who

used wit and whimsy to defeat his adversaries.

Eisenstein's contribution to the development of cinema rested primarily in his theory of editing, or montage, which focused on the collision of opposites in order to create a new entity. One of the greatest achievements in editing is the Odessa Steps sequence, in his film *Potemkin* (1925). Eisenstein intercut between shots of townspeople trapped on the steps by Czarist troops, and shots of the troops firing down upon the crowd. Members of the crowd became individual characters to viewers as the montage continued. Within the editing track the fate of these individuals was played out. A mother picks up her dead child and confronts the troops. Then she is shot. A student looks on in terror and then flees--his fate uncertain. An old woman prays to be spared, but she is killed by a soldier who slashes her face with his saber. When a woman holding her baby carriage is killed, she falls to the steps, and the carriage begins a precipitous decline--shots of the baby crying are intercut with wide shots of the carriage rolling down the steps. To Eisenstein, each individual shot contributed an energy within the editing track that yielded far more than the sum total of shots. In other words, the "combination" of shots through editing created a new entity, based on the expressive emotional energy unleashed through the editing process.

Terrorism

Terrorism is a term used to describe violence or other harmful acts. Terrorism expert Walter Laqueur in 1999 has counted over 100 definitions and concludes that the "only general characteristic generally agreed upon is that terrorism involves violence and the threat of violence". Most definitions of terrorism include only those acts which are intended to create fear or "terror", are perpetrated for an ideological goal (as opposed to a "madman" attack), and deliberately target "non-combatants".

As a form of unconventional warfare, terrorism is sometimes used when attempting to force political change by: convincing a government or population to agree to demands to avoid future harm or fear of harm, destabilization of an existing government, motivating a disgruntled population to join an uprising, escalating a conflict in the hopes of disrupting the status quo, expressing a grievance, or drawing attention to a cause.

The terms "terrorism" and "terrorist" (someone who engages in terrorism) carry a strong negative connotation. These terms are often used as political labels to condemn violence or threat of violence by certain actors as immoral, indiscriminate, or unjustified. Those labeled "terrorists" rarely identify themselves as such, and typically use other generic terms or terms specific to their situation, such as: separatist, freedom fighter, liberator, revolutionary, vigilante, militant, paramilitary, guerrilla, rebel, jihadi or mujaheddin, or fedayeen, or any similar-meaning word in other languages.

Terrorism has been used by a broad array of political organizations in furthering their objectives; both right-wing and left-wing political parties, nationalistic, and religious groups, revolutionaries and ruling governments.[1] The presence of non-state actors in widespread armed conflict has created controversy regarding the application of the laws of war.

An International Roundtable on Constructing Peace, Deconstructing Terror (2004) hosted by Strategic Foresight Group recommended that a distinction should be made between terrorism and acts of terror. While acts of terror are criminal acts as per the United Nations Security Council Resolution 1373 and domestic jurisprudence of almost all countries in the world, terrorism refers to a phenomenon including acts, perpetrators of acts of terror and motives of the perpetrators. There is a disagreement on definition of terrorism. However, there is an intellectual consensus globally that acts of terror should not be accepted under any

circumstances. This is reflected in all important conventions including the United Nations counter terrorism strategy, outcome of the Madrid Conference on terrorism and outcome of the Strategic Foresight Group and ALDE roundtables at the European Parliament

Leisure time

Recreation is very important for one health whoever we are we need leisure activities because they enable us our minds and bodies

If we go on working without a break we'll get bored and exhausted

Therefore we should spend our free time on the things we like doing much as listening to music and practising sport in this way we'll have energy to resume our studies and working

OK many I present you this object of the how can air pollution hurt my health. Air pollution can effect our health in many ways with a both short-term effects different groups of individuals are effected by air pollution in different ways .some individuals are much more sensitive to pollutants than are others. young children and elderly people after suffer more from effects of air pollution. people with health problems such as asthma .heart and lung disease may also suffer more when the air is polluted the extent to which individual is harmed by air pollution usually depends on the total of the damaging chemicals i.e the duration of exposure and the concentration of the chemicals must be taken into account..this is the end of paragraph i wish to benefit it ok

Rap in Morocco

Known Arab societies .. great social transformations of the way to dress, language and music minor, the latter known for a profound transformation in the structure here in Morocco. Years ago there was Umm Kulthum and sisters in the Middle and "Beatles" and the other in the west .. And no one heard something called "Rabbi" .. And now each city task by the way has turned into a "comfort dance" and "Hip Hop." "Allah Kaen" months a bridge in Morocco, started from Meknes and then to the rest of the cities .. If followed a march this group since incorporation, we find that it began - eg other teams - singing vocabulary "Albdaeh" .. and the market talk, but after that started and appeared on the television market and publicity, turned to singing, "sharply less" .. Loser "His tongue Alsulait also describes himself, no one is safe from the" Staemah " .. by the government to the parliament .. to .. Islamists to others is not known. People say that they want to live and have a family of "Rabbi", and that he is not afraid and does not acquit anyone .. and songs that can not hear in the "House" oversupplied Albdaeh .. vary between talk the curriculum vitae .. and love for his country .. and an affront to its enemies .. and of course the ever-present talk begin. It is noted that the last Owl "west of death" or "Moroccans to death became a trademark task in Morocco .. "Losers" to defend himself after facing charges of using words begin : "that convey the pulse of the street .. and that something will come from Him." , Considers itself the representative of the song of youth and finds that the future of "bridge" .. A few months ago, Moroccan officials : "Rabbi is the future of Moroccan song," saying this was a storm of opposition from those who are still Etarbon songs "languages" and regarded Rabbi outsider Ttaghavina .. and "incompatible with morality." Rabbi entered politics from the door wide : months before hosting Youth Socialist Union Party in Morocco Magti Rabbi Tawfiq Hazb known "Balkhasr" so Yahya evening attended by senior officials of the party : with songs that contain insults and dictionary "under the belt". Opponents of the party said that the Socialist Union "exploited rap to attract young people after its failed to do so." Professor Abdul Ghani Mendip professor of sociology at the University of Mohammad Alhams is that of Rabbi "comes within the framework of social transformation which Arafa Morocco." Hence, we must Ntani in sentencing and study the

issue in a scientific and rational use away from the emotions. And among the finds that the phenomenon of Rabbi alien Ttaghavina and therefore must be cured .. zeolite, and the shift from the view that natural community .. And among the finds that the Rabbi is the future .. and the song of Moroccan considers summer cloud will pass soon ... Among all those views we have the right to ask : Does the fact created alternatives for youth to Governance.

Internet

The Internet is a worldwide, publicly accessible network of interconnected computer networks that transmit data by packet switching using the standard Internet Protocol (IP). It is a "network of networks" that consists of millions of smaller domestic, academic, business, and government networks, which together carry various information and services, such as electronic mail, online chat, file transfer, and the interlinked web pages and other documents of the world wide web.

The USSR's launch of Sputnik spurred the United States to create the Advanced Research Projects Agency, known as ARPA, in February 1958 to regain a technological lead.[1][2] ARPA created the Information Processing Technology Office (IPTO) to further the research of the Semi Automatic Ground Environment (SAGE) program, which had networked country-wide radar systems together for the first time. J. C. R. Licklider was selected to head the IPTO, and saw universal networking as a potential unifying human revolution.

Licklider had moved from the Psycho-Acoustic Laboratory at Harvard University to MIT in 1950, after becoming interested in information technology. At MIT, he served on a committee that established Lincoln Laboratory and worked on the SAGE project. In 1957 he became a Vice President at BBN, where he bought the first production PDP-1 computer and conducted the first public demonstration of time-sharing.

At the IPTO, Licklider recruited Lawrence Roberts to head a project to implement a network, and Roberts based the technology on the work of Paul Baran who had written an exhaustive study for the U.S. Air Force that recommended packet switching (as opposed to circuit switching) to make a network highly robust and survivable. After much work, the first node went live at UCLA on October 29, 1969 on what would be called the ARPANET, one of the "eve" networks of today's Internet. Following on from this, the British Post Office, Western Union International and Tymnet collaborated to create the first international packet switched network, referred to as the International Packet Switched Service (IPSS), in 1978. This network grew from Europe and the US to cover Canada, Hong Kong and Australia by 1981. The first TCP/IP-wide area network was operational by January 1, 1983, when the United States' National Science Foundation (NSF) constructed a university network backbone that would later become the NSFNet.

It was then followed by the opening of the network to commercial interests in 1985.

Important, separate networks that offered gateways into, then later merged with, the NSFNet include Usenet, BITNET and the various commercial and educational networks, such as X.25, CompuServe and JANET. Telenet (later called Sprintnet) was a large privately-funded national computer network with free dial-up access in cities throughout the U.S. that had been in operation since the 1970s. This network eventually merged with the others in the 1990s as the TCP/IP protocol became increasingly popular. The ability of TCP/IP to work over these pre-existing communication networks, especially the international X.25 IPSS network, allowed for a great ease of growth. Use of the term "Internet" to describe a single global TCP/IP network originated around this time.

A revolution

A revolution (from Late Latin revolutio which means "a turn around") is a significant change that usually occurs in a relatively short period of time. Various defined revolutions have been happening throughout human history. They vary in terms of numbers of their participants (revolutionaries), means employed by them, duration, motivating ideology and many other aspects. They may result in a socio-political change in the socio-political institutions, or a major change in a culture or economy. Scholarly debates about what is and what is not a revolution center around several issues. Early study of revolutions primarily analyzed events in European history from psychological perspective[citation needed], soon however new theories were offered using explanations for more global events and using works from other social sciences such as sociology and political sciences. Several generations of scholarly thought have generated many competing theories on revolutions, gradually increasing our understanding of this complex phenomenon
